

APB10/APB10V Pressure/Vacuum Transmitter (0~10V, G1/4)

The APB range of high accuracy, low cost ceramic pressure and vacuum transmitters are designed for use in most industrial applications and are suitable for the measurement of most pressure mediums.

The transmitters incorporate a high quality thick-film ceramic sensor and special amplified circuit. Output is 0~10V DC (3-wire). The pressure diaphragm is made from ceramic material and its wetted parts are made from 316L stainless steel.

Because of the thermal stability of ceramic and its thickfilm resistance, the transmitters can be operated at a higher temperature range; at the same time this makes the zero and sensitivity thermal shifts over the whole operating temperature range of the transmitter very small.

- 0~10V DC output signal
- G1/4 1/4" BSP(M) process connection
- · Pressure and vacuum options
- · Vast pressure measurement range
- · Wide application scope and long service life
- · Automatic testing and laser trimming compensating zero and sensitivity
- · High accuracy and long-term stability
- · Good anti-corrosion and anti-impact ability
- · Available ranges from -1 to +100 bar
- IP65 rated
