### Modbus RTU / Modbus TCP Remote IO Modules

These remote IO modules based on RS485 Modbus RTU / Ethernet Modbus TCP communication for data acquisition and control systems.

These IO modules offer good reliability, easy for installation, easy maintenance, extremely cost-effective modules for industrial measurement and monitoring applications. They can be easily added into existing RS485 or Ethernet Modbus network.

Different types of IO modules are available for the users to select as per their requirement.

All Modules are having LED indications for monitoring the status of digital inputs & outputs and fault diagnostics. Special modules are available with interchannel isolation between channels. Modbus RTU modules have 2 wire RS485 interface with Modbus RTU protocol and Modbus TCP modules have Ethernet interface with Modbus TCP protocol.

## IO Studio

IO Studio is a windows based standard PC software used to configure IO modules on the network. Once the module is connected with the software, the real-time data and the configuration of the module can be viewed on the PC for troubleshooting.

RS485 Modbus RTU modules can be connected to the PC by using RS485 serial port or RS232 to RS485 serial converters or USB to RS485 serial converter. The address of the RS485 module can be set on the module by the dip switches on the front panel.
